Tutorial For Bibs in Double Applique.

All Done in the Hoop Method.

- 1) Hoop Water soluble material x2 layers in a 200x260 or 200x280mm hoop pull tight.
- 2) Place very thin Batting material and Bib applique material the size of hoop on top of the hoop, pin it to the water soluble material that is in hoop, or you can use spray to hold it down (I personally don't like spray makes my needle sticky)
- 3) Sew colours 1,2 then remove hoop from machine, cut out material not the batting, to the shape of the bib.(Be careful not to cut water soluble material that is in the hoop)(For better results if batting is thicker proceed to (4) LEAVE OUT THIS PROCEDURE.
- 4) Place the applique material for second applique piece on top of the bib material in the hoop, sew next 2 colours then remove hoop from machine and cut out second applique piece, all the way around.(This Procedure is only done if there is a applique design in the bib.)
- 5) Continue sewing until the last 3 colours.
- 6) Place towelling material a bit bigger than the hoop, under the hoop making sure that the whole design will be sewn down on the towelling material with the outline stitch. Also make sure the towelling material lies perfectly flat under the hoop.(If preferred you may want to pin it down making sure that pins are not in the way of the sewing) (NB..This procedure will always be done in the last 3 colours on all my bibs.)
- 7) After sewing this straight stitch, remove hoop from machine and cut the towelling material following the line of stitches from the back of the hoop, using outline stitch as a guide. Not too close. Also cut out the batting and applique material on the front of the hoop following the outline stitches, not too close to stitch line. Be careful not to cut water soluble material which is in the hoop.
- 8) Sew last 2 colours, remove hoop from machine, and bib from hoop.

9) Cut a small hole in eyelet for button. Or cut the button holes open. Sew on the button.

10) Cut away excess water soluble material and wash in warm soapy water. It is important that you soak them well to get rid of all the water soluble material. Otherwise your bib will be very stiff. Iron on the wrong side when dry, cloth on top, with a warm iron.

NB....It is very important to keep the water soluble material taught in the hoop at all times, as it might stretch with too much handling, so be careful. If it becomes floppy this can cause your design not to align up properly and cause gaps in the embroidery.

Another good tip to keep in mind when embroidering on towelling material, always embroider on top of water soluble material for a beautiful finish.

Enjoy making your bibs, they are great fun to make and sew out beautifully.
