# How I Digitize Lettering for Home Embroiderers

When I digitize lettering, my focus is always the home embroiderer, not commercial production speed. That's why many of my lettering designs include intentional trims between letters. Each letter stitches with its own secure tie-ins and tie-offs, which eliminates jump stitches, and creates a polished finish right off the machine. While this can increase the trim count, it actually means *less* work for the stitcher — no clipping the small jump threads between letters.

In cases where letters are very close together or extremely small, trims may not be necessary and I will leave minimal connecting stitches instead. Every design is evaluated individually so the lettering stitches cleanly and reliably for the home embroiderer. Which is what many of you have been asking for.
